

Overview

Our values at Simply Clean Aberdeen are delivery, integrity, and quality. We pride ourselves on our values which underpin the way we work and guide our daily interactions. In the age of COVID-19 we have developed even higher standards of cleanliness to protect your homes and commercial properties from the increased infection concerns and new health and safety challenges.

Scientific research on COVID-19

- The virus is dead on most surfaces after 72 hours
- The virus does not penetrate through fabrics
- The virus lives in bodily fluids and is not airborne; however, can be for a few seconds after someone has sneezed

PPE (Personal Protective Equipment)

At Simply Clean Aberdeen we are following the UK Government Guidelines for cleaning properties. Our employees wear disposable gloves, aprons and face covering and operate individually wherever possible. Employees sanitize their hands when arriving and leaving any property, and then as many times as they feel necessary whilst cleaning. These increased protection steps are in place to help protect you, your families, and your employees.

Cleaning & Disinfecting

Many household disinfectant cleaning solutions are effective against COVID-19. All the products that we use meet the Government guidelines to kill viruses and our employees have been trained appropriately to use them. All products have been tested to European standards - BS EN 14476, BS EN 1276 & BS EN 13697. All cleaning cloths and mops are changed between each clean and washed to the appropriate hygiene standards following all cleans.

Touch Points

We understand that high risk areas of the infection spreading are within things people touch. Therefore, we will ensure that all touchpoints are wiped clean with disinfectant. This will include:

- Door and cupboard handles
- Light switches
- Remote controls
- Taps, toilet seats, push buttons, shower controls
- Appliances
- Bins lids (external and internal)
- Heating controls
- Entry systems
- Key safe boxes including the number dials (for short stay tenancy cleans)

Sanitizing Fogging Machine

Looking to take hygiene one step further? Our fogging machine is a versatile piece of equipment that uses a fine spray to apply a chemical solution for cleaning and sanitising. The fogger uses pressure to create a fine mist which is applied to the targeted area and can spray up to 7 metres, enough to cover a large room in minutes. The fine fog can reach into corners and difficult areas and may also penetrate porous surfaces. When used in conjunction with an effective antiviral formula, fogging can kill a wide range of pathogenic viruses in under 5 minutes, leaving surfaces clean and safe for human contact. Fogging is also safe to use in medical environments and food preparation areas.

Bedding and linen

If your clean includes the changing of bedding and linen gloves will be worn to remove the bedding. Employees will not shake the bedding as, similar to a sneeze, this can release the virus into the air. All bedding and linnen will be placed in a bag and removed from the room before cleaning.

Employee health

If any employee presents coronavirus symptoms they will be sent home immediately. They will then be isolated for 14 days or will only return to work when they have had a negative testing result.
